moviniti

warehouse

Digital management of all warehouse processes

Warehouse management

- Digital support for all warehouse activities from goods receipt to goods issue

- Intuitive user guidance

- Real-time evaluation of inventory and warehouse movements

Just-in-sequence supply

- Receipt and processing of production data for orders in the correct sequence

- Orders can be processed according to different strategies

- Ensuring just-in-time and just-in-sequence loading

(Pre-)assembly

- Manual or automated creation of assembly orders

- Assembly as batch or in sequence

- Orders are processed via handheld device or monitor

Your advantages with moviniti

Efficient

- moviniti client ready for use within a week
- Little training required thanks to intuitive user guidance
- Easy to configure and integrate

Transparent

- Location-independent access to dashboard and web application
- Real-time data evaluation
- Pay-per-use licensing model with no limit on the number of users

Expandable

- Continuous expansion of general functionality
- Standardized interfaces available
- Applicable processes thanks to close contact with logistics partners
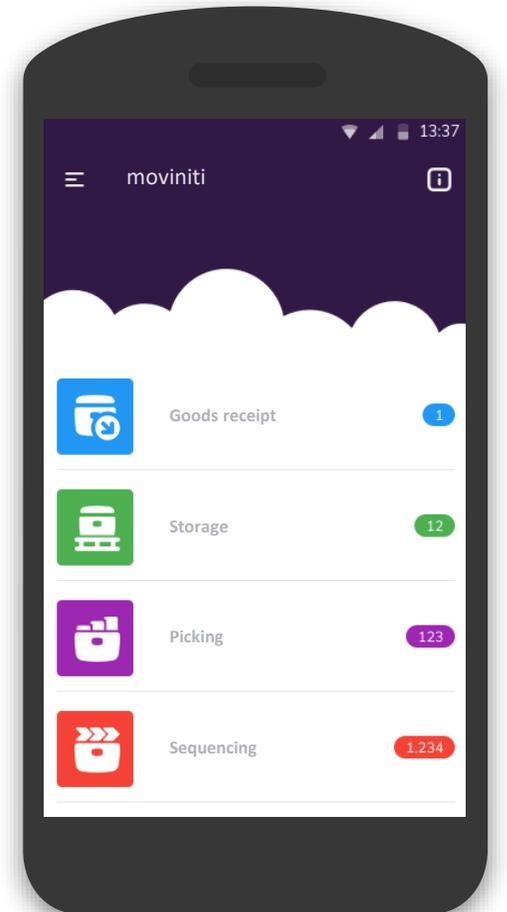

moviniti in use across industries

Simple warehouse management and control in the web area

- Web area for optimal warehouse management and control

- Easy processing and prioritization of warehouse orders

- Real-time tracking of all inventory and every pick

- Export of data to Excel (e.g. article master data, warehouse inventory, etc.)
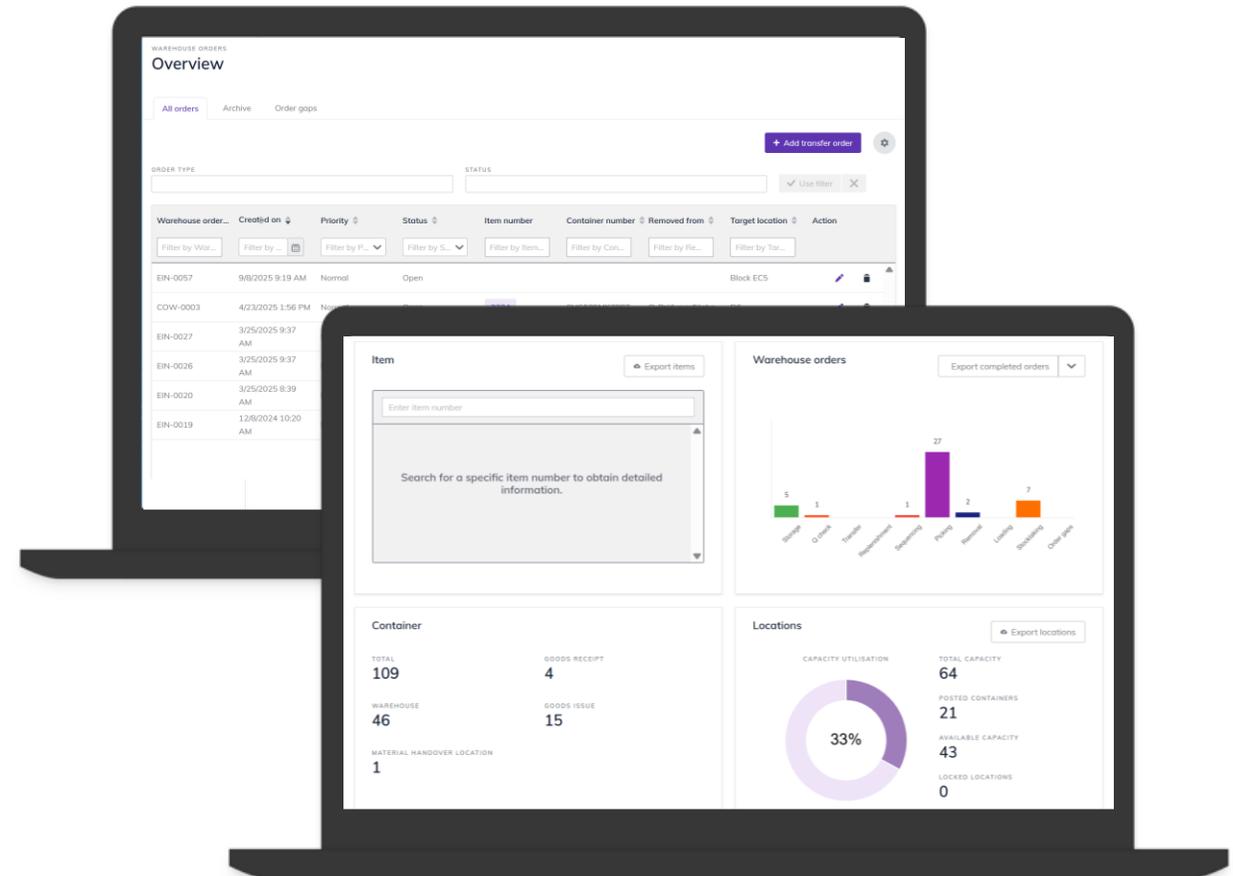

Executing warehouse orders with the mobile app

- Process-driven processing of all warehouse orders—from receipt to loading

- High process reliability thanks to intuitive user guidance and validation via scans

- Control station function for quick transfer or modification of inventory

- Can be installed on all Android-based handhelds or smartphones

moviniti standard interfaces and EDI message standards available (EDIFACT, VDA, Odette)

ERP system (e.g. SAP)

moviniti

- - - ▶ Interface

Functionality is based on the VDI standard

Warehouse structure	Inventory management	ERP interfaces
Master data management	Transport management	Internal warehouse processes
Warehouse structure	**Goods issue**	Transfer
Notification in goods receipt	Loading / shipping	Replenishment
Receipt		Transfer
Storage		Inventory
Quality inspection in goods receipt		Control station
Separation/repackaging		Order management
		Order picking
		Packaging *(not yet available)*

VDI core functions

Label standards configuration	Quality inspection in goods issue	Sequencing
Batch traceability	Read-aloud function MDE	Stock removal
Serial number management	Multilingual	Call-off data processing sequence
Control station function	Dashboard	Warehouse performance
Web access to archive data	Route optimization	

Additional core functions of moviniti

Four simple requirements for getting started with moviniti

Required hardware procured

- Laptops with browser – Chrome recommended
- Printer available
- Handhelds or smartphones with Bluetooth scanners running Android operating system (min. version 5.1)

Internet and Wi-Fi coverage

- Internet available in offices
- Wi-Fi available in the warehouse or sufficient LTE availability

moviniti account and master data

- moviniti account available (will be provided within 3-5 days)Master data created (articles, suppliers, areas, users)
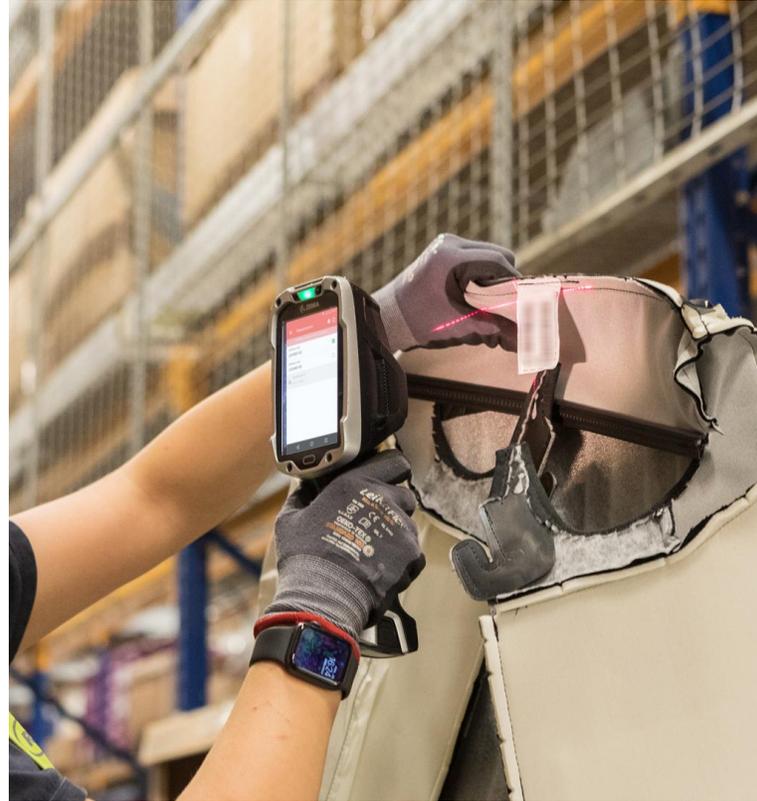

Storage areas labeled

- Area labels printed and affixed to storage areas (standard labels available in moviniti)

Current manufacturers of handhelds available in moviniti

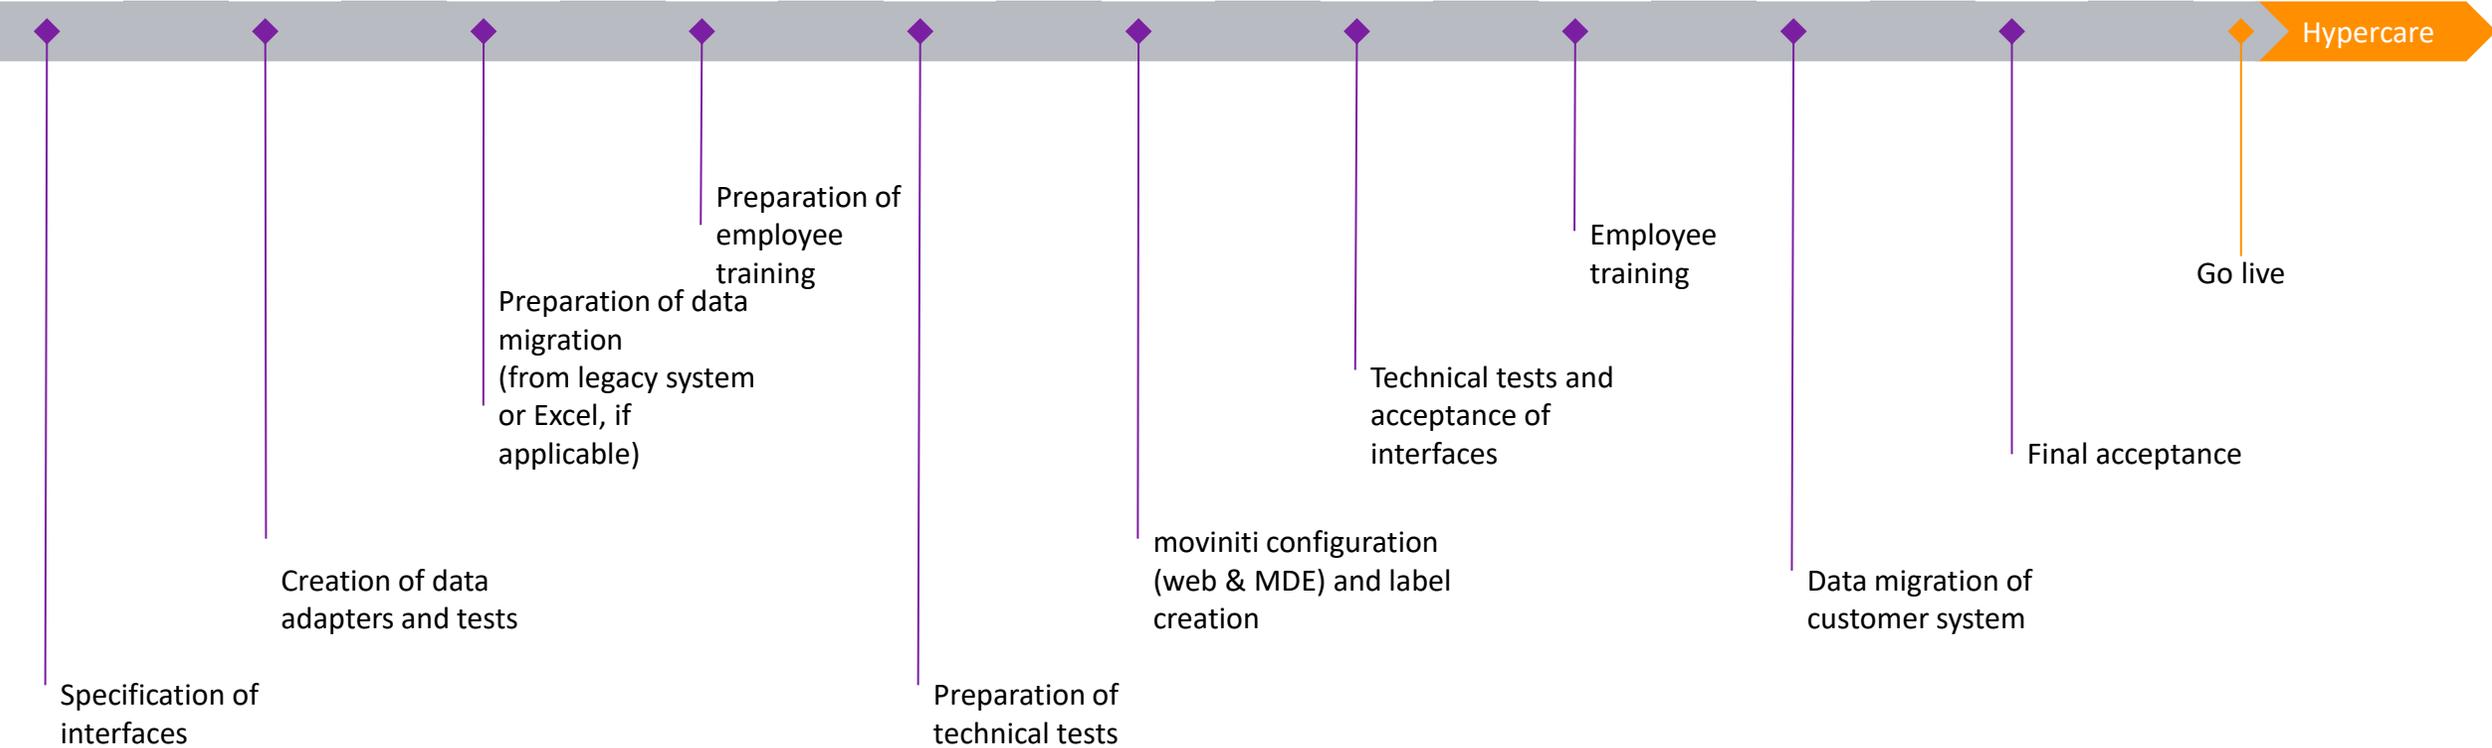

Hands-free assembly and order picking with **ProGlove**®

Work on the move with LTE scanners from **Zebra**®

Long-distance scanning and text recognition with scanners from Keyence®

Support before, during, and after rollout

Ready for use in 3 days – start including interfaces possible within 6 to 8 weeks

Hypercare

Preparation of employee training

Preparation of data migration (from legacy system or Excel, if applicable)

Employee training

Go live

Technical tests and acceptance of interfaces

Creation of data adapters and tests

moviniti configuration (web & MDE) and label creation

Final acceptance

Data migration of customer system

Specification of interfaces

Preparation of technical tests
